Django-Framework Certification

(DJF-378)

Django is a web development framework that assists in building and maintaining quality web applications. Django helps eliminate repetitive tasks making the development process an easy and time saving experience. Django is a high-level Python web framework that encourages rapid development and clean, pragmatic design. Django makes it easier to build better web apps quickly and with less code.

Java Programming Certification

(JPC-265)

Java is an easy to learn, powerful programming language. It has efficient high-level data structures and a simple but effective approach to object-oriented programming. Java's elegant syntax and dynamic typing, together with its interpreted nature, make it an ideal language for scripting and rapid application development in many areas on most platforms. This tutorial introduces the student informally to the basic concepts and features of the Java language and system. It helps to have a Java compiler handy for hands-on experience, but I have also provided downloadable lecture notes so the tutorial can be read off-line as well. Java is one of the most powerful yet simple to learn programming languages in the world. What makes Java stand out from other programming languages is its simplicity. Java is mainly used for Android Development, Web Development and Software projects.
